## The Effects of Secondhand Smoke on Children

"The scientific evidence is now indisputable: secondhand smoke is not a mere annoyance. It is a serious health hazard that can lead to disease and premature death in children and nonsmoking adults."

– U.S. Surgeon General, Vice Admiral Richard H. Carmona, M.D., M.P.H., F.A.C.S. (June 2006)

#### Secondhand Smoke Is Toxic

➤ Secondhand smoke contains more than 4,000 chemicals, including formaldehyde, ammonia, lead, chromium, benzene and arsenic. More than 50 of these chemicals can cause cancer in humans.

# **Unborn Babies and Infants Are at Risk**

- ➤ Smoking and exposure to secondhand smoke during pregnancy can lead to a low birth-weight baby and can reduce a baby's lung function.
- ➤ During pregnancy, many of the compounds in secondhand smoke
  - change the way a baby's brain develops.
- ➤ Babies who breathe secondhand smoke have weaker lungs. Their breathing problems can continue as they grow older and even when they become adults.
- ➤ Mothers who smoke during pregnancy are more likely to have their babies die of sudden infant death syndrome (SIDS).
- ➤ Babies who breathe secondhand smoke after they are born also are more likely to die of SIDS.

#### Children Are at Risk

- ➤ Children who breathe secondhand smoke are more likely to suffer from pneumonia, bronchitis, wheezing and coughing spells, ear infections, and more frequent and severe asthma attacks.
- ➤ The lungs of older children who breathe secondhand smoke grow less, causing breathing problems.

#### **How To Protect Children**

- ➤ If you smoke, quit. Call the North Dakota Tobacco Quitline at 1.800.QUIT.NOW (1.800.784.8669) for help.
- ➤ Do not allow anyone to smoke near your child, including babysitters and family members.
- ➤ Do not allow anyone to smoke in your home or car. Opening a window does not protect children from secondhand smoke.
- ➤ Do not take your children to any public places that allow smoking.
- ➤ Talk to your children about the dangers of tobacco and secondhand smoke.
